

## I. Readme.md.

### Steps to run

- Clone the repository using "git clone "
- Change "Username" and "Password"
- npm install
- npm run cy:run

Incomprehensible step. Where should I change "Username" and "Password"?

## II. Config

```
config > TS config.config.ts > [e2e] default > e2e
1  import { defineConfig } from 'cypress'
2
3  export default defineConfig({
4    video: true,
5    defaultCommandTimeout: 5000,
6    execTimeout: 5000,
7    taskTimeout: 5000,
8    pageLoadTimeout: 30000,
9    requestTimeout: 5000,
10   responseTimeout: 30000,
11   screenshotsFolder: 'reports/screenshots',
12   videosFolder: 'reports/videos',
13   env: {
14     allureResultsPath: '../allure-results',
15   },
16   e2e: {
17     // We've imported your old cypress plugins here.
18     // You may want to clean this up later by importing these.
19     setupNodeEvents(on, config) {
20       return require('cypress/plugins/index.js')(on, config)
21     },
22     baseUrl: 'http://automationpractice.com/index.php',
23     specPattern: 'cypress/e2e/tests/**/*.test.ts',
24   },
25 })
```

1) It is better to rename the file **config.config.ts** as **cypress.config.ts**

2) BaseUrl doesn't work, due to following reason:

automationpractice.com/cgi-sys/suspendedpage.cgi

**This Account has been suspended.**

Contact your hosting provider for more information.

### III. Tests => myAccount.test.ts

```
cypress > e2e > tests > TS myAccount.test.ts > describe('My Account Functionality')
1  import { loginPage } from "../pages/loginPage";
2
3  describe('My Account Functionality', () => {
4    beforeEach(() => {
5      cy.visit('https://google.com');
6      //loginPage.launchApplication()
7    })
8    it('Sample Test', () => {
9      console.log("This is a sample test")
10   })
11 })
```

1. The top line is not needed because loginPage is not used.
2. Title «My Account Functionality» doesn't match with actual link (https://google.com).
3. There is no necessity to write for one test beforeEach.

### IV. Tests => login.test.ts

```
TS config.config.ts
cypress
  > downloads
  > e2e
    pages
      TS loginPage.ts
      TS myAccountPage.ts
    tests
      TS login.test.ts
      TS myAccount.test.ts
  > fixtures
  > plugins
  JS index.js
  > support
  > docs
  > node_modules

20 myAccountPage.logout()
21 myAccountPage.validateSuccessfulLogout()
22 })
23
24 it('login with invalid email credentials read data from fixture', function () {
25   loginPage.login(this.data.invalid_credentials.invalid_email.emailId,
26     this.data.invalid_credentials.invalid_email.password)
27   loginPage.validateLoginError('Authentication failed.')
28 })
29
30 it('login with invalid password credentials read data from fixture', function () {
31   loginPage.login(this.data.invalid_credentials.invalid_password.emailId,
32     this.data.invalid_credentials.invalid_password.password)
33   loginPage.validateLoginError('Authentication failed.')
34 })
35
36 it('login with wrong email format credentials read data from fixture', function () {
37   loginPage.login(this.data.invalid_credentials.wrong_email_format.emailId, this.d
38   loginPage.validateLoginError('Invalid email addresssssss.')
39 })
40 })
```

Instead of “addresssssss” it should be “address”.
